GARY INCOME MAINTENANCE EXPERIMENT
PUBLIC USE FILE
RECORD FORMAT DESCRIPTION

Introduction

Abstract

This document describes the technical characteristics and record contents of the Gary Income
Maintenance Experiment Public Use File (GARYFILE). The file contains data on income, employment, and
family characteristics over a four-year time span. The data cover the period between 1971 and 1974
and provide observations from months prior to the start of the experiment, during the experiment, and
after families were disenrolled. Records are present for every family enrolled as an experimental or
a control and for each person age 16 or over ever a member of an enrolled family.

GARYFILE data are suitable for several kinds of research applications including family
composition changes over time, monthly and yearly variations on family income, labor force experience
of adult family members, and patterns of income reporting to the experiment versus state and federal
agencies. The data are readily adaptable to longitudinal analyses of families whose structure remained
basically the same over the 48-month time span, i.e., continuously husband-wife or continuously
single-parent.

Technical Charactersitics

Logical record types: Family and person. There is one record for each family enrolled in the ex-
periment containing family composition data and data on children under 16, and earned and unearned
income. There is one record for each "core" person ever a member of an enrolled family containing
person demographic, employment, unemployment, and income data. (Core persons are defined as being
16 years or older at some time during the experiment.)

Number of logical records: 1820 family records and 5300 person records.

DPLS version
Family and
person records
in separate
rectangular
files.

<u>Technical characteristics:</u>   (cont'd)

Sort Sequence: Records are grouped by family, with the family record followed by person records
for all core members of that family. The file is ascending order by 6-digit family number and
person number within family.

Length of records (logical record size): Fixed length, 10,400 characters.

Blocking factor (physical record size: 10,400 characters or 1 logical record per block.

Number of standard-length tape reels and density: 1 reel at 6250 bytes per inch (BPI), 2 reels
at 1600 BPI, and 4 reels at 800 BPI.

Language, parity, and recording tracks: EBCDIC, odd parity, 9 tracks.

Data representation and missing values: All fields contain integer values with implied decimals as
specified in the record format description for some variables. The following not applicable (NA)
or missing value code scheme has been applied to monthly continuous variables.

> 9s...9 = Months after attrition
> 9s...8 = Family participating, but person not present in
>   family (Person record only)
> 9s...7 = Question not asked on the interview covering this
>   time period, or data not collected for this time period
> 9s...6 = Question or item not applicable
> 9s...5 = Family or person should have responded, but answer is not
>   available
> 9s...4 = Data missing
> 9s...3 = No match with Gary sub-file
> 9s...2 = One or more values used to construct the variable is missing

<u>References</u>

There are two basic references for the GARYFILE. One is the <u>Glossary of Variable Descriptions</u>
<u>for the Gary Income Maintenance Experiment Public Use File</u>. The glossary generally reviews how the
data on GARYFILE were derived from sub-files containing answers to a series of interviews covering
the time span, data taken from report forms filled out by respondents on a monthly basis, and

References (continued)

administrative records. It then provides a detailed definition of each variable on the family and
person records (in the order they appear on the file), indicating the original question text,
algorithms and procedures used to construct the variable, N.A. codes added, and any major problems
in deriving particular variables and their resolution.

The Users' Guide for the Gary Income Maintenance Experiment, Public Use File is the second
major reference for the GARYFILE. It describes the experimental design and administration of the
experiment, reviews the data obtained, and outlines additional sociological data which may be obtained
by special extract.

Marginals

One-way tabulations have been run on the family and person records, providing ranges, means,
and standard deviations for all continuous variables (using the STATS edit program) and frequency
counts for values of coded variables. These tabulations are available as a package and should be
consulted before trying to work with the data. They provide valuable information aobut the distri-
bution of responses, N.A. codes and so on.

Record Format Description

The remainder of this document contains the description of the record format for the Gary
Income Maintenance Experiment family and person records. The description indicates, for each
variable, its field position (character location), length, a brief textual description including code
values for coded variables, and an acronym (of eight characters or less) for use with packages.

Periodic Interview Variables

The variables in this section are dollar amounts of income as reported by the family head in the periodic interviews. The maximum time period covered by these data is January 1971 (month 1) through December 1974 (month 48)—hence each variable is allowed space for 48 months of information for each variable. Nonwage income amounts are given first, followed by earnings and unemployment income information.

INCOME REPORT FORM VARIABLES

Each family in the experiment filed up to 36 monthly Income Report Forms; families with fewer than 36 months of report forms were those which left the experiment early (attrited) or those which enrolled so late in the experiment that the cut-off month, June 1974, came before their last report form was filed. The first month for which an IRF was filed was December 1970 (month 0) and the last month for which an IRF was filed was June 1974 (month 42).

No distinction was maintained, in the course of recording experiment data, between families which did not file an IRF, and those which filed an IRF with no positive data (i.e., they reported zero dollars, zero hours, etc.). The 9s...5 missing data code has been used to highlight months for which an IRF should have been filed, but for which no IRF data are available (either none was filed, or there were no positive data). 9s...7s are used to indicate months before the family filed its first IRF and after the family filed (or should have filed) its last (36th) IRF.

The months covered by this section of variables are months 0–42.

ADMINISTRATIVE VARIABLES

Data from seven different administrative sources are given here. In the case of
Gary experiment payments, AFDC, and some tax information, these variables
are the only sources of information on the GARYFILE for these subjects. In most
cases, however, they concern income sources shown elsewhere on the file. The
time period covered by each subset of variables varies, as does the format used
for each subset.

Periodic Interview Variables: Income

The variables in this section are dollar amounts of income reported by person in periodic interviews. The maximum time period covered by these data is January 1971 (month 1) through December 1974 (month 48); each variable is allowed space for 48 months of information for each variable.

Nonwage income is given first, followed by earnings and then by unemployment variables. Nonwage income is not given for all months, as it was sometimes asked by family only. Further, it should be noted that the respondent for most nonwage income sources was the filer, who answered for each recipient.

INCOME REPORT FORM VARIABLES

Each family filed up to 36 monthly Income Report Forms, starting with the month before the family's enrollment. The first month for which an IRF was filed was December, 1970 (month 0) and the last month for which an IRF was filed was June, 1974 (month 42). Thus, the months covered by this section of variables are months 0-42.

Families with fewer than 36 months of report forms filed were those which left the experiment early (attrited) and those which enrolled so late in the experiment that the cut-off month of June, 1974, came before their 36th report form was filed.

No distinction was maintained, in the course of recording experiment data, between families which did not file an IRF form, and those filing one which indicated no positive data (i.e., no dollars of income, no hours worked, etc.). The 9s...5 NA code has been used to highlight months for which an IRF should have been filed but for which the data are not available, for whatever reason. 9s...7s are used to indicate months before the family filed its first IRF and after the family should have filed its last (36th) IRF.

ADMINISTRATIVE VARIABLES

Data from six different administrative sources are given here for personal income. For AFDC family and person administrative variables provide the only information on the files; for Food Stamps they provide the only information on the person record. In the remaining cases, these variables concern income-sources shown elsewhere on the file.

The time period covered by each subset of variables varies, as does the format of each subset.

*Point of Information

At one time code 314 was Rockwell Standard Steel Mill during the time space involving the 3rd Periodic. Rockwell Standard Steel Mill and Rockwell Steel and Sping merged thus becoming North American Rockwell. It was decided at the time to rename code 314 to represent North American Rockwell.

The following Industries are listed because decisions had to be made concerning proper numbers or codes that had to be assigned to each. They did not fall into obvious categories so they are given here for reference use in determing similar Industries Codes of the same type.
